### 2. MEMBUAT PROJECT CONSOLE/TANPA GUI

### 3. IMPLEMENTASI WEB API

- File Program.cs

```
1  var builder = WebApplication.CreateBuilder(args);
2
3  // Add services to the container.
4
5  builder.Services.AddControllers();
6  // Learn more about configuring Swagger/OpenAPI at https://aka.ms/aspnetcore/swashbuckle
7  builder.Services.AddEndpointsApiExplorer();
8  builder.Services.AddSwaggerGen();
9
10 var app = builder.Build();
11
12 // Configure the HTTP request pipeline.
13 if (app.Environment.IsDevelopment())
14 {
15     app.UseSwagger();
16     app.UseSwaggerUI();
17 }
18
19 app.UseHttpsRedirection();
20
21 app.UseAuthorization();
22
23 app.MapControllers();
24
25 app.Run();
26
```

- File MoviesController.cs

```
2211104002  modul9_NIM.Controllers.MoviesController  Movies
using Microsoft.AspNetCore.Mvc;
using modul9_2211104002;
using modul9_NIM.Models;
using System.Collections.Generic;

namespace modul9_NIM.Controllers
{
    [ApiController]
    [Route("api/[controller]")]
    public class MoviesController : ControllerBase
    {
        private static List<Movie> Movies = new List<Movie>
        {
            new Movie
            {
                Title = "The Shawshank Redemption",
                Director = "Frank Darabont",
                Stars = new List<string> { "Tim Robbins", "Morgan Freeman" },
                Description = "Two imprisoned men bond over a number of years, finding solace and eventual redemption through acts of common decency."
            },
            new Movie
            {
                Title = "The Godfather",
                Director = "Francis Ford Coppola",
                Stars = new List<string> { "Marlon Brando", "Al Pacino" },
                Description = "The aging patriarch of an organized crime dynasty transfers control of his clandestine empire to his reluctant son."
            },
            new Movie
            {
                Title = "The Dark Knight",
                Director = "Christopher Nolan",
                Stars = new List<string> { "Christian Bale", "Heath Ledger" },
                Description = "When the menace known as the Joker wreaks havoc and chaos on the people of Gotham..."
            }
        };

        [HttpGet]
        public ActionResult<List<Movie>> GetAll()
        {
            return Ok(Movies);
        }
    }
}
```

```

    {
        return Ok(Movies);
    }

    [HttpGet("{id}")]
    0 references
    public ActionResult<Movie> Get(int id)
    {
        if (id < 0 || id >= Movies.Count)
            return NotFound("Movie not found");

        return Ok(Movies[id]);
    }

    [HttpPost]
    0 references
    public ActionResult Add(Movie movie)
    {
        Movies.Add(movie);
        return Ok(new { message = "Movie added successfully" });
    }

    [HttpDelete("{id}")]
    0 references
    public ActionResult Delete(int id)
    {
        if (id < 0 || id >= Movies.Count)
            return NotFound("Movie not found");

        Movies.RemoveAt(id);
        return Ok(new { message = "Movie deleted successfully" });
    }
}

```

- Movie.cs

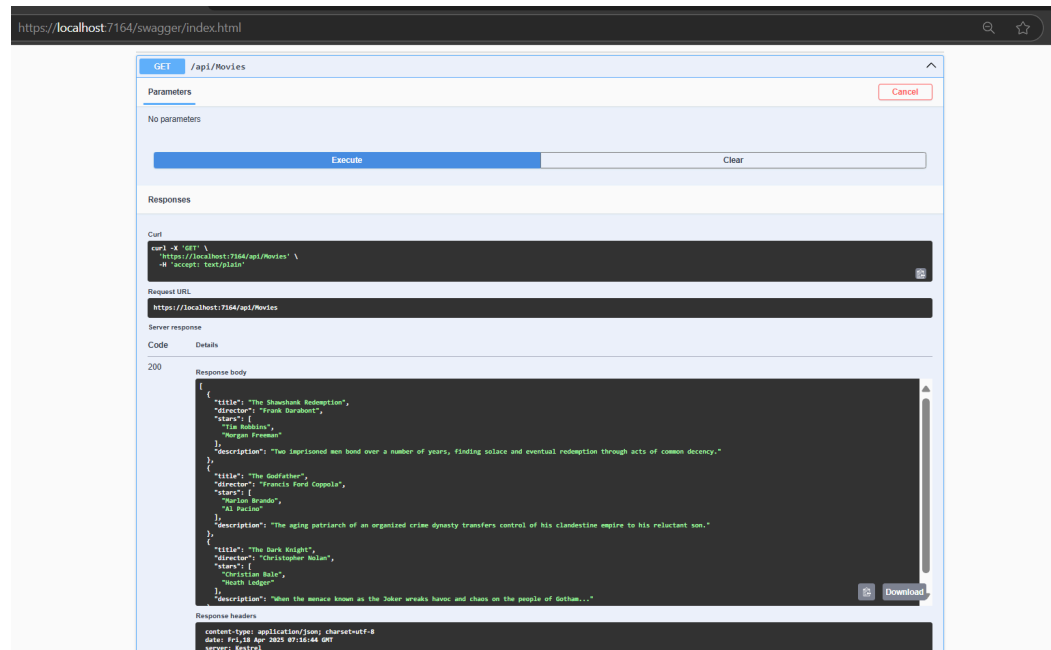

```

dul9_2211104002 modul9
1 using System.Collections.Generic;
2
3 namespace modul9_NIM.Models
4 {
5     8 references
6     public class Movie
7     {
8         3 references
9         public string Title { get; set; }
10        3 references

14        3 references
15        public string Description { get; set; }
16    }
17 }

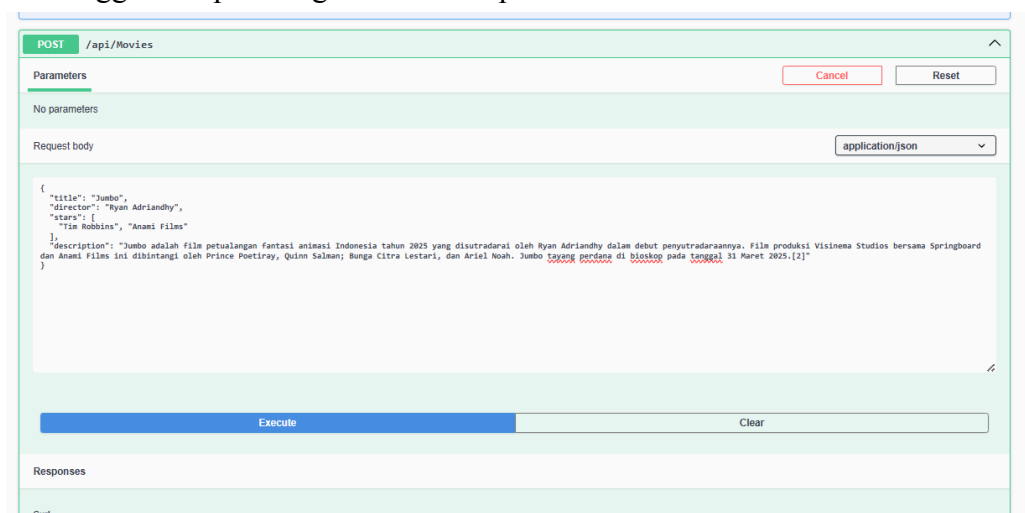

```

#### 4. MENDEMONSTRASI WEB API

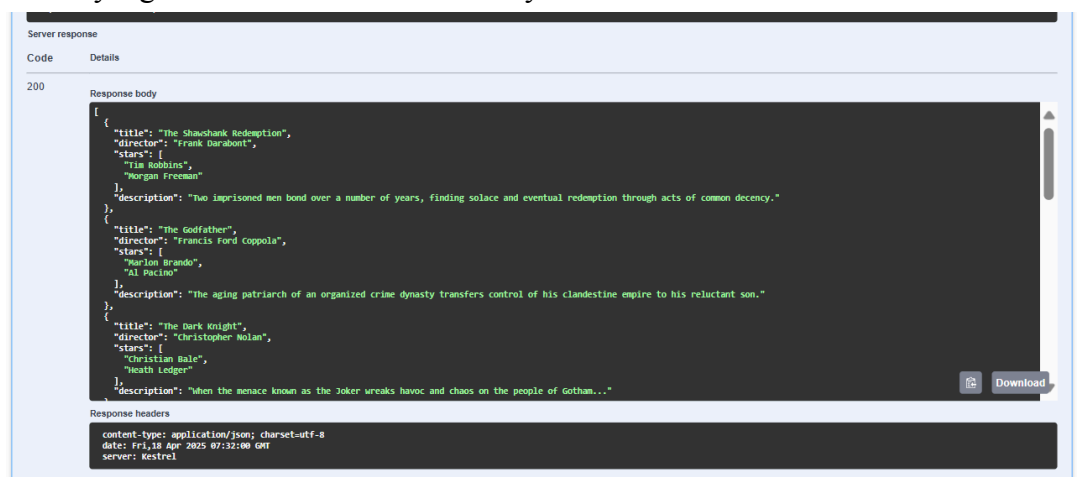

- Mencoba “GET /api/Movies” saat baru dijalankan yang mengeluarkan list film dari TOP 3 IMDB seperti pada tampilan berikut pada saat dicoba dengan menekan tombol “Try it out” dan tombol “Execute”

- Menambahkan Movie baru yaitu urutan ke-4 pada TOP IMDB list dengan memanggil API pada bagian “POST /api/Movies”

- Cek list/array dari semua Movie lagi dengan “GET /api/Movies”, pastikan Movie yang baru ditambahkan sebelumnya sudah ada:

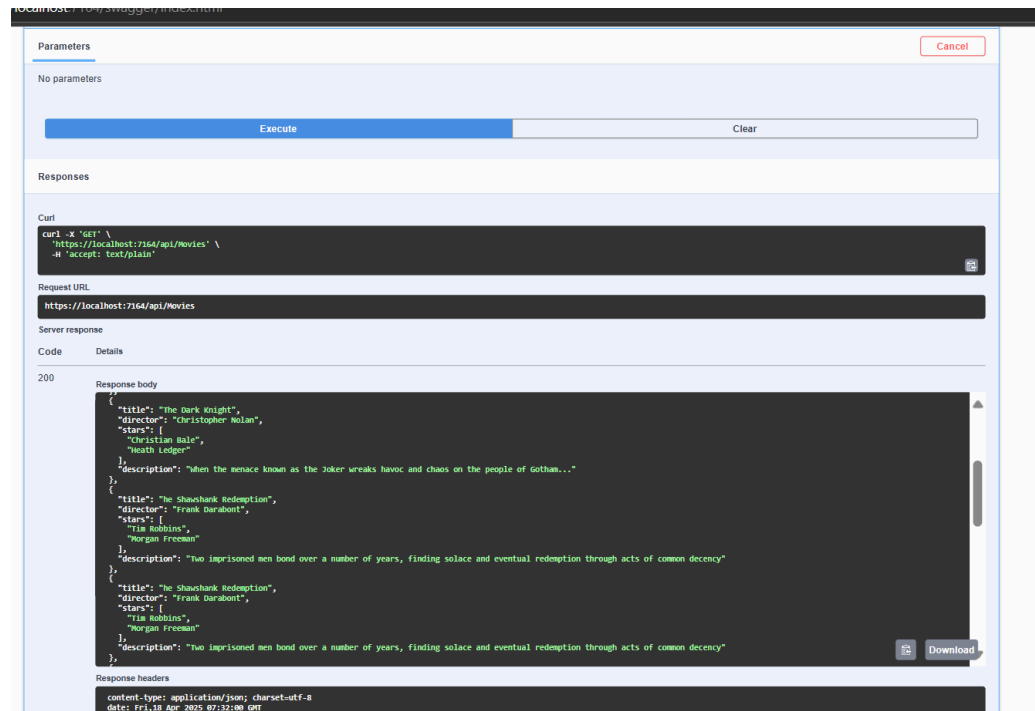

- Mencoba meminta Movie dengan index 3, “GET /api/Movies/3” yang seharusnya mengembalikan Movie yang baru saja ditambah:

The screenshot shows a REST client interface with a green header bar indicating a 200 OK status. The URL bar shows "GET /api/Movies/{id}" with a "Cancel" button. The "Parameters" tab is active, showing a table with columns "Name" and "Description". A parameter "id" is listed as "required", "integer(\$int32)", and "(path)", with the value "3" entered in the input field. Below the parameters are "Execute" and "Clear" buttons. The "Responses" section shows the "Curl" command: `curl -X 'GET' \ "https://localhost:7164/api/Movies/3" \ -H 'accept: text/plain'`. The "Request URL" is `https://localhost:7164/api/Movies/3`. The "Server response" section shows a 200 status code and a JSON response body: `{ "title": "The Shawshank Redemption", "director": "Frank Darabont", "stars": [ "Tim Robbins", "Morgan Freeman" ], "description": "Two imprisoned men bond over a number of years, finding solace and eventual redemption through acts of common decency" }`. The "Response headers" section shows: `content-type: application/json; charset=utf-8`, `date: Fri, 18 Apr 2025 07:36:09 GMT`, and `Server: Kestrel`. At the bottom, there is a "Responses" table with columns "Code" and "Description", showing "200" and "OK".

- Menghapus objek Movie dengan index ke-1 dengan “DELETE /api/Movies/1”

The screenshot shows a REST client interface with a red header bar indicating a 200 OK status. The URL bar shows "DELETE /api/Movies/{id}" with a "Cancel" button. The "Parameters" tab is active, showing a table with columns "Name" and "Description". A parameter "id" is listed as "required", "integer(\$int32)", and "(path)", with the value "1" entered in the input field. Below the parameters are "Execute" and "Clear" buttons. The "Responses" section shows the "Curl" command: `curl -X 'DELETE' \ "https://localhost:7164/api/Movies/1" \ -H 'accept: */*'`. The "Request URL" is `https://localhost:7164/api/Movies/1`. The "Server response" section shows a 200 status code and a JSON response body: `{ "message": "Movie deleted successfully" }`. The "Response headers" section shows: `content-type: application/json; charset=utf-8`, `date: Fri, 18 Apr 2025 07:37:36 GMT`, and `Server: Kestrel`. At the bottom, there is a "Responses" table with columns "Code" and "Description", showing "200" and "OK".

- Cek list/array dari semua Movie sekali lagi dengan “GET /api/Movies”, film dengan ranking kedua “Godfather” sudah tidak ada di list:

### Penjelasan Program :

Program ini merupakan implementasi dari Web API menggunakan ASP.NET Core yang berfungsi untuk mengelola data film (Movie) secara sederhana tanpa menggunakan basis data. API ini dibuat sebagai bagian dari praktikum Modul 9 untuk mempelajari desain dan konstruksi API menggunakan Swagger. Dalam program ini, terdapat sebuah kelas bernama Movie yang merepresentasikan data film dengan atribut berupa judul film (Title), sutradara (Director), daftar pemeran utama (Stars), dan deskripsi film (Description). Data film disimpan menggunakan list statis (static List<Movie>) sehingga dapat diakses dan dimodifikasi selama program berjalan. Pengelolaan data dilakukan melalui MoviesController, yaitu sebuah controller yang menyediakan empat endpoint utama berbasis REST API. Endpoint tersebut meliputi GET /api/Movies untuk menampilkan seluruh data film, GET /api/Movies/{id} untuk menampilkan data film berdasarkan indeks, POST /api/Movies untuk menambahkan data film baru, serta DELETE /api/Movies/{id} untuk menghapus data film tertentu berdasarkan indeks. Semua data awal diinisialisasi dengan tiga film teratas dari daftar IMDb. Program ini juga mendukung dokumentasi otomatis melalui Swagger yang dapat diakses pada alamat <https://localhost:<port>/swagger/index.html>, sehingga pengujian API dapat dilakukan secara langsung melalui antarmuka web. Dengan pendekatan ini, pengembangan dan pengujian API menjadi lebih efisien dan terstruktur.
